I. APPLE NEWS

A. Apple lays off 600 workers after moving away from self-driving car plans

B. US v. Apple:

The US Department of Justice has filed a case against Apple for violating antitrust laws. More specifically, the case revolves around how Apple has used its locked-down iPhone ecosystem to build a monopoly.

The DOJ alleges that Apple blocks “super” apps, suppresses mobile cloud streaming services, blocks cross-platform messaging apps, limits third-party digital wallets, and even limits how well third-party smartwatches work on its platforms. This is the third time that the DOJ has sued Apple for antitrust violations in the past 14 years, and if you’re wondering why it was filed in New Jersey, we might have an explanation for that.

During a press conference announcing the lawsuit, Deputy AG Lisa Monaco said Apple’s efforts “smothered an entire industry.” A response to the lawsuit from Apple spokesperson Fred Sainz says, “This lawsuit threatens

who we are and the principles that set Apple products apart in fiercely competitive markets.”

US sues Apple over iPhone monopoly, explained

The DOJ’s complaint “...made an even stronger case than I thought that they could,” said Vanderbilt Law School professor Rebecca Haw Allensworth. She continued on, saying, “They told a very coherent story about how Apple is making its product, the iPhone and the products on it – the apps – less useful for consumers in the name of maintaining their dominance.”

This case is likely to have a widespread impact, and given how long the DOJ’s case against Microsoft in the ’90s lasted, it could be a while before we see a resolution.

C. Apple’s antitrust case is getting a new judge

Judge Michael E. Farbiarz has recused himself from the case.

The Department of Justice's massive antitrust case against Apple will unfold before a new judge. A court filing on Wednesday reveals that Judge Michael E. Farbiarz has determined his "recusal is necessary" under the code of conduct for US Judges.

The filing says Farbiarz's "disqualification is mandatory and cannot be remitted by the parties." Judge Julien Xavier Neals, whom President Joe Biden nominated to the US District in 2021, will preside over the case instead.

It's not clear why Judge Farbiarz was disqualified from the case, but there are a couple of possibilities. The specific rule mentioned by the filing — Canon 3(C)(1)(d) — says a judge must disqualify themselves from a proceeding when the "judge's impartiality might reasonably be questioned." That could mean Farbiarz, or someone he's related to, is too closely tied to the case.

But don't worry — the trial will still take place from a US District Court in New Jersey...

D. Will the Apple antitrust case affect your phone's security?

Apple says its walled garden protects users; the DOJ says it undermines security.

Who's right?

Of all the allegations that the Department of Justice has laid at Apple's door, the most contentious is perhaps its salvo over security and privacy. Apple has warned that if the DOJ gets its way, Apple products — especially the iPhone — will be less secure for users. Meanwhile, the DOJ claims that Apple's much-touted privacy features are pretextual.

The complaint in the DOJ’s antitrust lawsuit against Apple says that the company “wraps itself in a cloak of privacy, security, and consumer preferences to justify its anti-competitive behavior.” In the press conference announcing the lawsuit, Assistant Attorney General Jonathan Kanter said Apple’s choices have actually made its system “less private and less secure.”

“Apple selectively compromises privacy and security interests when doing so is in Apple’s own financial interest,” the complaint reads, “such as degrading the security of text messages, offering governments and certain companies the chance to access more private and secure versions of app stores, or accepting billions of dollars a year for choosing Google as its default search engine when more private options are available.”

It’s a particularly aggressive shot at a company whose branding strategy heavily emphasizes

privacy by design. In Epic v. Apple, the judge found that user privacy and device security were acceptable reasons behind some of the company's extremely restrictive (and financially lucrative) App Store policies.

In press briefings, spokespeople for Apple have taken umbrage with the DOJ's assertion that the company's privacy and security features are pretextual and have asserted that the antitrust suit will ultimately harm users.

The DOJ's attack on one of the core tenets of Apple's brand identity relies on how broad the general concept of user privacy is, going far outside of the issue of App Store review to make its point.

The complaint emphasizes that, unlike iMessages, iPhone users' SMS communications with Android users — i.e., green bubble texts — lack encryption.

“Apple forces other platforms to use SMS messaging. It doesn't allow them to integrate with iMessage or another encrypted message

platform built-in,” Cliff Steinhauer, director of information security and engagement at the National Cybersecurity Alliance, told The Verge in a phone interview. Since SMS messages aren’t encrypted, they’re less secure by default.

Apple has previously said its devices would begin supporting RCS, a more secure messaging protocol that will make communications with Android devices encrypted, later this year.

But the DOJ is on shakier ground once the attention shifts away from green bubble texts and back to the App Store. At the DOJ press conference, a reporter noted that a member of Congress said that stripping Apple of the ability to vet the products uploaded onto the App Store could “open the door to apps made in China and Russia, and other adversaries, if you will.”

Attorney General Merrick Garland said the lawsuit’s goal is to limit “exclusionary conduct” in the App Store, not to reduce Apple’s ability to vet apps. The lawsuit specifically asks the court to prevent Apple “from using its control of app distribution to undermine cross-platform

technologies such as super apps and cloud streaming apps.”

But super apps like WeChat effectively function as app stores of their own. For the DOJ, this has less to do with privacy than it does competition. It’s not like that’s coming out of nowhere — the lawsuit notes a board of directors presentation in which Apple described super apps like WeChat as a “major headwind” to boosting iPhone sales abroad.

However, some security experts note that Apple’s App Store is indeed safer than those on Android phones.

“Our data from millions of device scans on iOS and Android devices around the world suggests that open app stores lead to more malicious activity than closed ecosystems,” said Danny Rogers, the CEO of the cybersecurity company iVerify, whose app detects malware on phones and computers. “So while opening up app stores to third parties might be good for competition, it will likely increase malicious activity as well.”

That malicious activity ranges from operating system-level compromise to the presence of spyware like Pegasus, Rogers told The Verge. “We see almost 100x more frequency of security issues pop up on Android compared to iOS,” Rogers said, even though the app has conducted more iOS scans than Android scans.

Daniel Kahn Gillmor, the senior staff technologist at the American Civil Liberties Union’s speech, privacy, and technology project, said the higher rate of malware on Android devices may be related to the phones having a “much longer shelf life” than iPhones. “You’re going to find more vulnerabilities on these old, outdated Android devices simply because those old, outdated Android devices are out there and they’re on sale,” Gillmor said. “Apple has done a good job of keeping their update process regular – and also at decommissioning old iPhones. They’ll tell you, ‘This thing is not good anymore, you have to get a new one. We cannot support it.’”

Gillmor agrees that an app store “with much looser controls” could lead to “more invasive,

infectious garbage being pushed onto people's phones," he said. "But that risk is worth it, because it means that we also allow software that Apple might disapprove of, for whatever their political reasons are."

Gillmor noted that Apple banned the game Phone Story, which satirized the company's manufacturing process, from the App Store in 2011. An app that tracks US drone strikes was rejected from the app store a dozen times before Apple allowed it to go through.

"It's unquestionable that Apple exercises tight control over its ecosystem than is necessary to have a healthy software ecosystem" on its phones, Gillmor said. "Even Apple's computers let you install software from anybody that you want."

For now, it's simply too soon to say how iPhone users' privacy will be affected — we don't even yet know what the Justice Department wants as a remedy if it wins, let alone what it will actually get. (And all of that, of course, is contingent on it

winning in the first place.) “There are so many different pieces of this,” Steinhauer said. “I don’t see how they could possibly win all or lose all.”

E. United States v. Apple is pure nerd rage

A lawsuit is, functionally speaking, a communication between lawyers and a judge. Because it is a specialized missive to a specialized audience, it can become highly technical and jargonistic — this is especially so when it comes to niche areas of law like antitrust or complex sectors of litigation like technology. Tech lawsuits are often obscure even to techies, interspersed with bizarre software terminology that is pretty much meaningless outside of a court of law.

(For example, antitrust law loves “middleware,” and copyright law loves “technological protection

measure.”). [Read Article](#)

F. How an artificial tooth monopoly put the DOJ's blockbuster Apple antitrust suit in New Jersey

So, what do artificial teeth have to do with the Department of Justice's massive lawsuit against Apple? Well,

they may be one of the reasons why the DOJ decided to file its lawsuit in the state of New Jersey — instead of, say, Virginia or Washington, DC, like it did for Google and Microsoft.

The DOJ previously filed — and won — a similar antitrust case against a company that makes fake teeth in the Third Circuit, which includes New Jersey.

G. How Apple's war on super apps became the center of its antitrust fight

Apple is facing a monumental antitrust lawsuit from the Department of Justice, and a large part of the agency's argument centers around Apple's alleged attempts to suppress cloud gaming services and so-called "super" apps. Namely, the DOJ claims Apple stifled the development of both types of services to maintain its monopoly on the mobile market. As cloud streaming services started becoming more popular in 2020, Apple introduced new rules that seemed designed to give services like Xbox Cloud Gaming, Facebook Gaming, and GeForce Now a place on the App Store. But in reality, it did the opposite. The rules severely limited the presence of cloud gaming services on the App Store, as Apple required developers to submit their games to the App Store for approval individually — rather than having them exist in a singular hub of games.

H. Five takeaways from the huge US antitrust lawsuit against Apple

The US Department of Justice is suing Apple for “monopolizing smartphone markets” to help guarantee the iPhone’s continued success – to the detriment of consumers and third-party developers. The suit was filed on March 21st and will take a long time to play out. It touches on everything from iMessage lock-in and App Store developer fees to “super apps” and cloud gaming. If the government is successful, we could witness a sea change moment for the iPhone and Apple’s ecosystem at large. Apple, as expected, is deeply critical of the DOJ’s antitrust filing. “This lawsuit threatens who we are and the principles that set Apple products apart in fiercely competitive markets,” said Apple spokesperson Fred Sainz. The company also said the legal battle sets “a dangerous precedent, empowering government to take a

heavy hand in designing people’s technology.” [Read Article](#)

I. UNITED STATES SUES APPLE

The US Department of Justice accused Apple of operating an illegal monopoly in the smartphone market in an expansive new antitrust lawsuit that seeks to upend many of the ways Apple locks down iPhones.

The DOJ, along with 16 state and district attorneys general, accuses Apple of driving up prices for consumers and developers at the expense of making users more reliant on its phones. The parties allege that Apple “selectively” imposes contractual restrictions on developers and withholds critical ways of accessing the phone as a way to prevent competition from arising, according to the release. II. APPLE HARDWARE

existing MacBook that'll improve your MacBook experience, workflow, and efficiency.

B. SAVE Your Mac And Your MONEY! External SSDs For Mac Explained

Going over why you should use Portable SSDs for your MacBook or Desktop Mac.

ALL THE GEAR IS IN THIS VIDEO IS LISTED BELOW 📌

If you're buying a new Mac, whether that's a Mac Studio, Mac Mini, MacBook Pro or MacBook Air — they all have one thing in common, soldered internal storage. In this video, we're going to go over external SSDs for Mac and why using a Solid State drive can save or extend the life of your machine, all while saving you some money.

EXTERNAL SSDs & ENCLOSURES IN THIS VIDEO:

Samsung T7: <https://amzn.to/3M0zpk8>

Acasis Thunderbolt Enclosure: <https://amzn.to/3PWj4hN>
ZikeDrive USB4 SSD Enclosure: <https://shrsi.com/49hyk>

C. Do NOT Buy These Common MacBook Accessories! (Hard Shell Case, Webcam Cover, Keyboard Cover)

Perfect for:
4K Streaming

Does your 4k look right? You may be experiencing auto-switching to lower resolutions or buffering due to slow speed.

The
Eth
for
CO
yo
wi

Video Meetings

Your home office may not be the best spot for signal and video lag can be awkward. Get stable, clear video calls with this adapter.

Gaming

WiFi has more latency causing lag and slow reaction time in games. Get a direct connection for the best performance.

D. Solve Home Wi-Fi Issues with this cool trick!

2-Pack of DECA Adapters w/ Power

Converts Ethernet to coax, and coax back to Ethernet

Speeds up to 100Mbps

Use existing coax cable to get high-speed where you need it

Great for streaming 4K, especially on media servers

DECA is compatible with MOCA adapters and does NOT require DIRECTV.

E. Travel Dock E

The best bus-powered 6-port mini dock to connect, charge, display, and import on-the-go. About the size and weight of a hockey puck. Buy Now Only \$59.99 from OWC!

Unprecedented Mobile Connectivity In The Palm Of Your Hand

6 Ports: Maximize your mobile connectivity with two USB 3.2 Type-A ports, HDMI 2.0 port,

SD card reader, Gigabit Ethernet port, and USB-C power pass through

Fast and Convenient: Connect a portable drive, keyboard, or mouse via one of the USB 3 ports¹

Stay Charged: Charge small mobile devices like wireless earbuds, smartwatches, and most smartphones through one of the USB 3 ports²

See the Bigger Picture: Connect to displays, TVs, and projectors with up to 4K resolution via the HDMI 2.0 port

Better Connection: Say goodbye to low quality, patchy Wi-Fi by connecting to the Gigabit Ethernet port

Ingest Your Work: Copy photos and movies at speeds up to 312MB/s via the SD card reader

Powerful Option: Bus powered, or use existing USB-C power adapter to provide up to 100W pass-through charging power to a notebook or other device³

Take Anywhere: Lightweight, palm-sized aluminum housing with integrated USB-C cable

Works with All: Adds ports to Macs, PCs, tablets, or phones with a built-in USB-C or Thunderbolt 3 port

The Best Just Got Better

When the gadget pros at Ars Technica called the OWC USB-C Travel Dock E the “Best Hub for iPad” and the “Best Travel Hub,” we thought our work was done. But we always strive to make the best even better. So, when tech users said they wanted an Ethernet port on their travel dock, their wish was our command. The same unrivaled high-speed data performance, pass-through power, and versatility now with the reliability of Gigabit Ethernet connectivity! Meet the 6-port OWC Travel Dock E.

Mobile Life, Simplified

The OWC USB-C Travel Dock E reduces the hassle of adapter and dongle heft, while expanding your connectivity options with six essential ports: USB 3 Type-A, HDMI 2.0, SD card reader, Gigabit Ethernet, and USB-C power pass through. Through its integrated USB-C connecting cable, the compact Travel Dock E lets you transform any location – be it a studio, classroom, boardroom, or coffee shop – into a mobile office. The OWC Travel Dock E gives you the ability to connect, charge, display, and import at will with USB-C or Thunderbolt 3-equipped computers, tablets, and phones.

Nothing can squash productivity faster than slow, low-quality Wi-Fi. But the OWC Travel Dock E isn't going to let you go down like that. Its Gigabit Ethernet port has an industry standard connector, so you can plug in anywhere for a speedy server connection, uninterrupted downloads and reliable file transfers.

Portable And Powerful

Unlike other mini docks that sacrifice usability to remain portable, OWC Travel Dock E packs a heavyweight punch akin to a desktop dock. This compact dock is about the size and weight of a hockey puck, and it can be used via bus power when you don't have access to an outlet. Or simply connect a USB-C power adapter to the Travel Dock E's USB-C power delivery port to charge your device with up to 100W of power on the go.

Do It All

The OWC Travel Dock E isn't just a one hit wonder. Through this compact dock's single integrated USB-C cable, you can:

Make a powerful presentation on a 4K HDMI display

Share, stream, and surf quickly and reliably fast with an Ethernet network

Transfer files with storage devices in the blink of an eye

Charge up small mobile devices for on-the-go use

Ingest photos and movies directly from media cards with the SD card reader

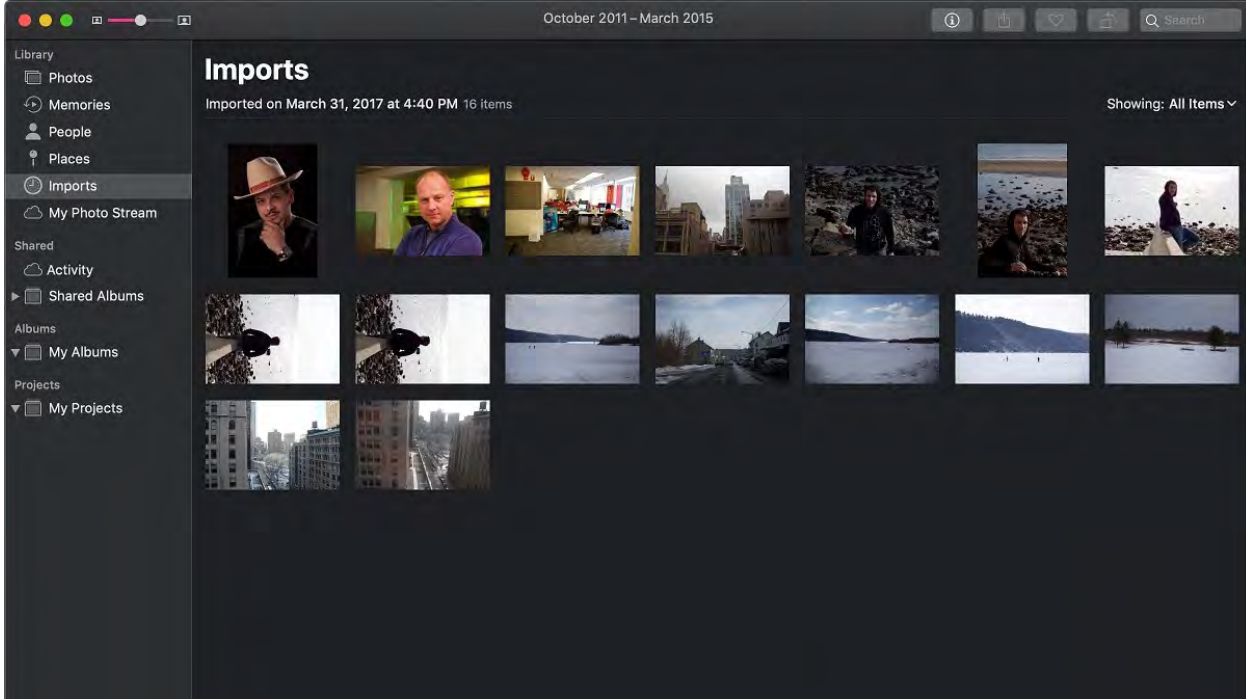

Enjoy the convenience of a full-sized keyboard or mouse with your notebook

Disconnect In One Click

Safely disconnect multiple drives in a single click. OWC Dock Ejector was designed by OWC hardware and software engineers to ensure all data is written before disconnection, saving time and protecting against data loss. It makes losing your hard-earned work a thing of the past.

Trusted by Pros & Enthusiasts the World Over

At OWC, we build our hardware to meet the highest reliability and performance standards. Our technology is built to be 100% reliable. We rigorously quality test the OWC USB-C Travel Dock E, and we back it with a 2 Year OWC Limited Warranty and award-winning customer support

III. APPLE SOFTWARE

A. 14 UNIQUE Mac Apps You Can't Live Without!

Here's 14 free Mac apps you'll want to install!
These apps and tools will help secure your Mac or MacBook, boost productivity, and get the

most out of your Mac without spending a dime!

B. Apple Photos

You don't have to shell out the big bucks for a capable photo-editing tool on Mac; the free, built-in Apple Photos app does the job just fine. Access photos stored in iCloud and use Apple Photos to edit, add filters, and share. It's a PCMag Editors' Choice and one of our picks for best photo-editing software.

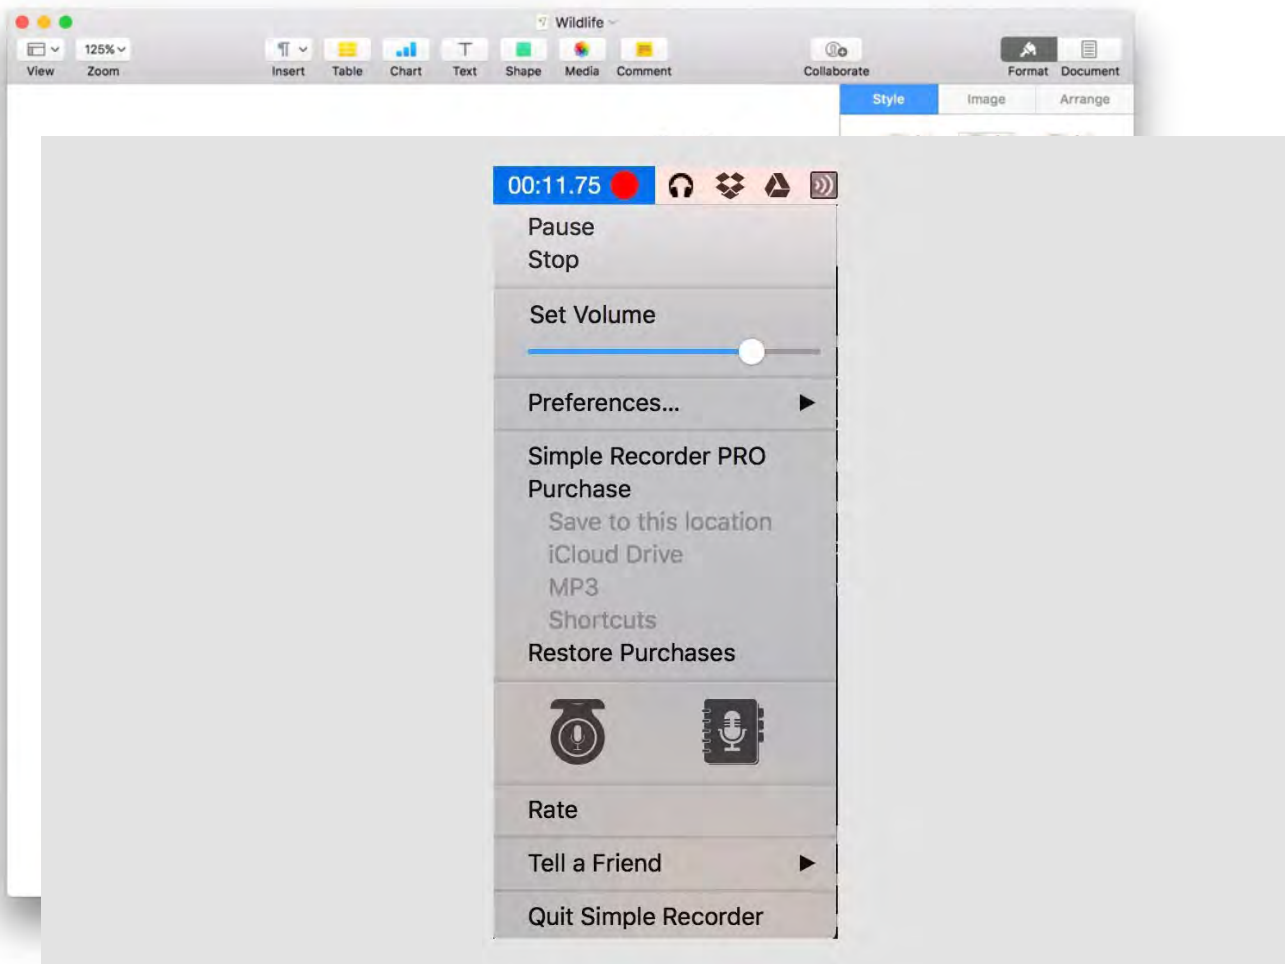

C. BBEdit

Looking for a simple, capable text editor for your Mac? For years, TextWrangler was the go-to app, but Bare Bones has since phased it out for the more powerful BBEdit. The general-purpose text-editing app excels at data-file editing and manipulation of text-oriented data. Bare Bones yanked BBEdit from the Mac App Store a few years ago, so it's currently available on its website for \$49.99, but release notes for BBEdit 12.6 suggest it might soon return to Apple's store, 9to5Mac reports.

D. Pages/ Numbers/Keynote

Apple's productivity suite has been a benefit to new Mac buyers for years, but now everyone can get them. Previously available for \$20 apiece, Apple quietly made them all free, and you won't find a better set of tools without opening your wallet. With professional features, powerful collaboration, and tremendous cross-platform versatility, Apple's office suite of Pages, Numbers, and Keynote can stand shoulder-to-shoulder with apps sporting much higher price tags. Things like Touch ID protection and real-time tracking belie its free status, and of course, there are iOS companion apps that are also free so you can work wherever you are. And don't worry if you have a mountain of Word, Excel, or PowerPoint files—it'll work with those, too.

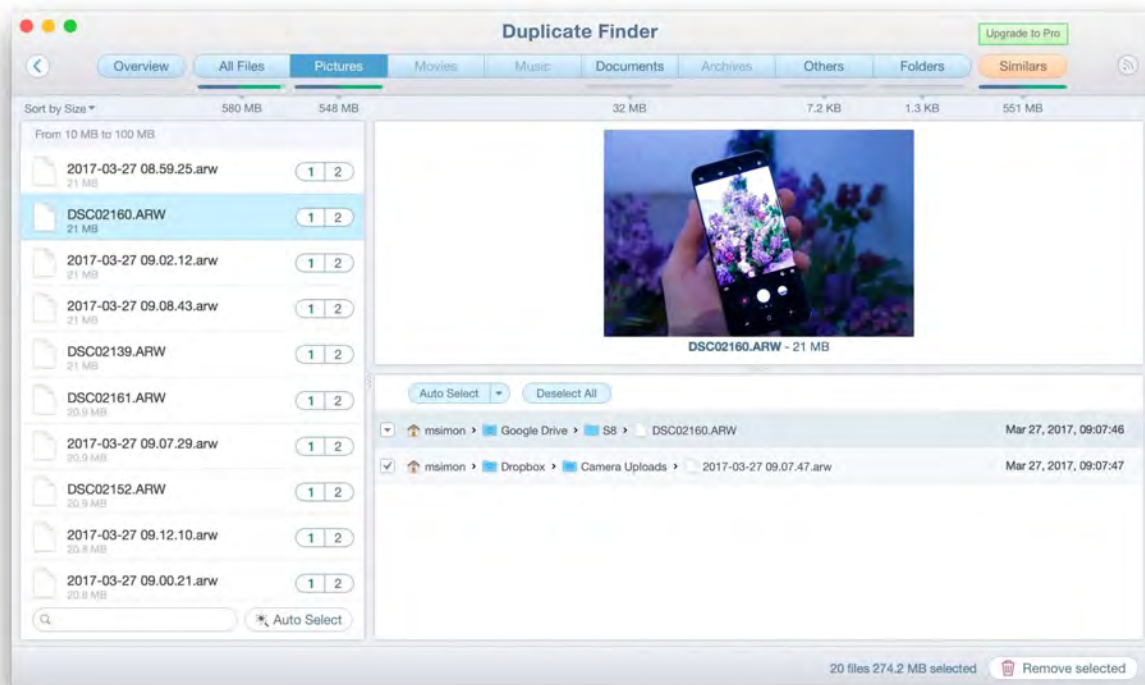

E. Simple Recorder

Sometimes, you just need a quick way to record audio on your Mac, and QuickTime doesn't exactly live up to its name. That's where Simple Recorder comes in. Once you install it, a record button is never more than a click away, sitting in your menu bar until called upon. The free version is pretty light on the features, but you can change the sample rate, switch between mono and stereo, adjust the volume, and save your

recording right from the menu bar. An in-app purchase will unlock a few extra features like mp3 recording and keyboard shortcuts, but the free version will be more than capable for most users.

F. Duplicate File Finder

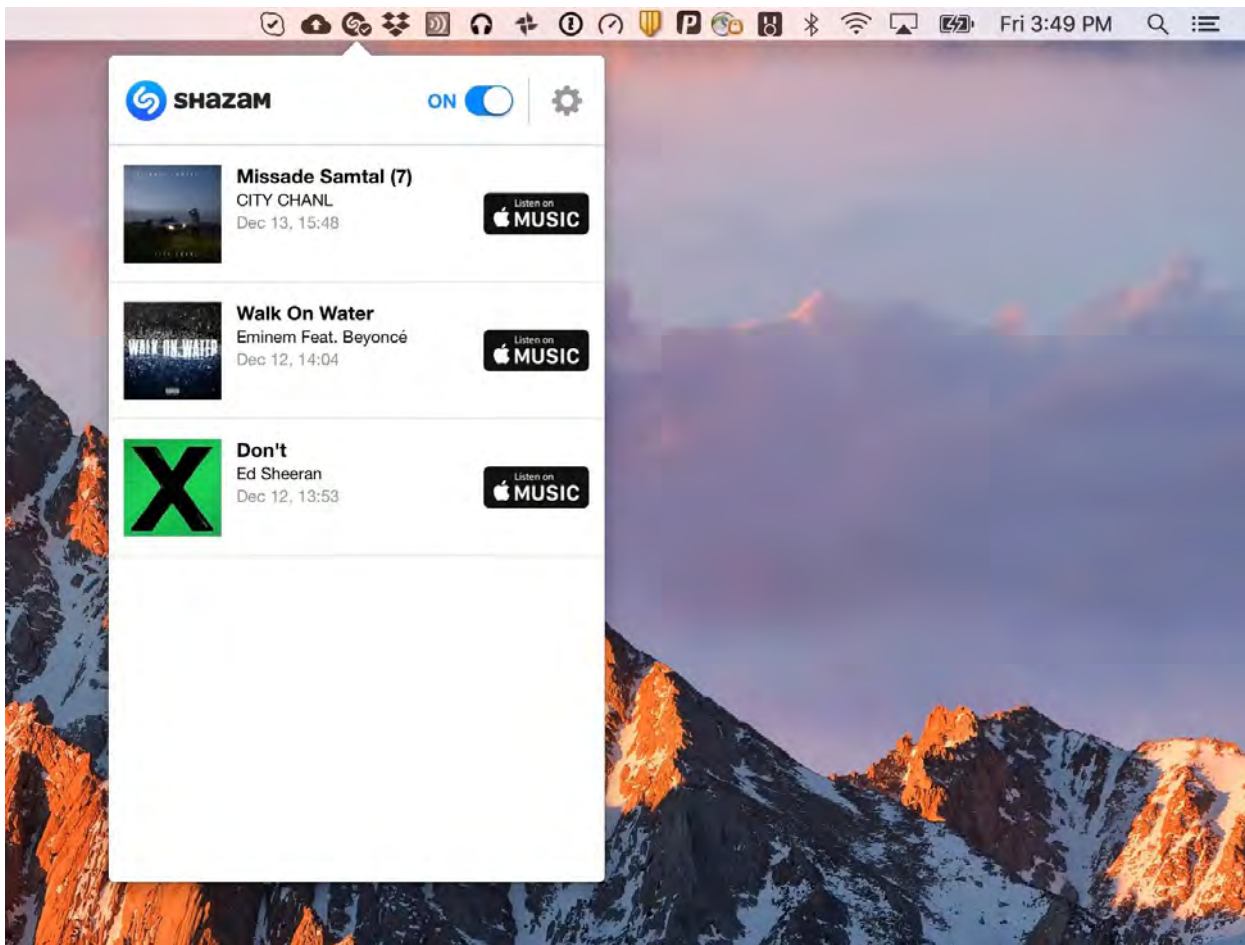

If you've been using your Mac for a while, there's a good chance you have

accumulated duplicate files along the way. And some of them could be eating up precious space on your drive. You could run a full disk cleaner to find and root them out, but if you want to quickly find double files and get on with your day, make space for Duplicate File Finder in your Applications folder. Simply drag a folder onto its window and within seconds you'll have a full report of the duplicates on your machine, letting you see what they are and where they're hiding, and letting you delete them in a snap. Unless you opt for the \$5 pro version, you'll have to deal with the occasional ad, but it's an indispensable tool nonetheless.

G. Shazam

We all know how great the Shazam app is on our phones, but it might be

even better on the Mac. It does the same thing—identify songs that it hears and direct you to where you can buy them—but on the Mac it's always listening for music. And as soon as the Shazam app hears a song, it'll identify it for you, whether it's played on your Mac or somewhere else in the room. And now that Apple owns Shazam, it's kind of like a peek at what is almost certain to be a future macOS feature that you can play with right now.

H. IINA

While VLC will always have a place on our Mac, newer-comer IINA is making a strong case for supremacy. Its sleek, minimal design makes it feel like a fresh and modern video player, while features like dark mode and picture-in-picture put VLC to shame. But IINA's best feature is its uncanny ability to play basically any file type you throw at it, from years-old local files to YouTube playlists. Plus, it's written in Swift and open-source, so you can bet the features—including native M1 Mac support—will keep on coming.
